SCORREVOLE

PARALLELO

Lo scorrevole parallelo Albertini è un serramento scorrevole complanare a ribalta formato da due ante (con o senza montante verticale a separarle), di cui una scorre su un binario parallelo alla prima attraverso un apposito carrello scorrevole. E' personalizzabile sia nell'essenza e colorazione del legno che nei rivestimenti esterni (alluminio o bronzo).

The Albertini parallel tilt and slide is two-panel system (with or without a vertical mullion) in which both panels are in the same plane when closed. The operable panel is fitted with special articulated pivoting/sliding gear that allows it to move inward, out of plane with the fixed panel and to slide across the interior face of the fixed panel. (The action is similar to the sliding doors on minivans) The operable panel can also be tilted in place to create ventilation while retaining security against forced entry.

Параллельно-раздвижные конструкции представляют собой раздвижной переплет с откидывающимися полотнами, состоящий из двух створок, только одна из которых скользит по металлической направляющей с помощью специальных роликов.

PARALLEL TILT AND SLIDE

Dotato di ferramenta a nastro e comando forzato, con maniglione a leva monocomando, lo scorrevole parallelo è particolarmente indicato per situazioni architettoniche in cui sia previsto un ingombro minimo del telaio (che è di 68 mm) con luci architettoniche non superiori a 3 m di larghezza.

This kind of window is customisable both in woods/finishing and in external cladding (Aluminium or Bronze). With perimeter, multi-point locking and single-control lever handle, this system offers an architectural solution where a minimum frame dimension is required (just 68 mm). The system is available in a maximum width of 3000 mm.

Параллельно-раздвижной переплет оснащен современной фурнитурой с принудительным управлением и одной ручкой для управления створкой и является идеальным решением для экономии места (коробка 68 мм, максимальная ширина 3 м).
